

CHAPTER V

CONCLUSION AND SUGGESTION

A. Conclusion

The data analysis, as shown in the previous chapter, indicates that students' speaking ability gave effect by using the Peer Tutoring Technique compared to conventional. The Peer Tutoring Technique had a significant effect on students' speaking ability, particularly in relation to pronunciation, grammar, vocabulary, fluency, and comprehension. This indicates that there was a significant impact of the Peer Tutoring Technique on students' speaking ability in asking for and giving information in class VIII at SMP Negeri 4 Lembah Melintang. This effect can be observed from the mean value of the post-test for the experimental class (69.55), which is higher than that of the control class (56.80). Furthermore, the statistical data described in the findings chapter showed that the sig value (2-tailed) of the independent sample t-test was $p = 0.002$, which is less than $\alpha = 0.05$. This means that the hypothesis was accepted.

B. Suggestion

Based on the conclusion, the use of the Peer Tutoring Technique has a significant positive impact on students' speaking abilities. Therefore, the researcher offers several recommendations: First, it is hoped that English teachers will implement this technique during the speaking lessons to enhance students' pronunciation, grammar, vocabulary, fluency, and comprehension. This approach can make the teaching and learning experience more enjoyable and engaging.

Teachers are encouraged to select materials and methods that are interesting and appropriate for the students' level and competencies.

Second, for the students, while both the Peer Tutoring Technique and discussion methods are effective, they are not the only solutions for addressing challenges in learning speaking. There are numerous other meaningful technique available to help improve their speaking ability.

Lastly, for readers, the findings suggest that the Peer Tutoring technique can effectively enhance students' speaking ability. It is hoped that the results of this study will serve as a valuable reference for subsequent researchers aiming to conduct improved studies in the future.
